CCSS.Math.Content.7.RP.A.1 Compute unit rates associated with ratios of fractions, including ratios of lengths, areas and other quantities measured in like or different units. For example, if a person walks $\frac{1}{2}$ mile in each $\frac{1}{4}$ hour, compute the unit rate as the complex fraction $\frac{1/2}{1/4}$ miles per hour, equivalently 2 miles per hour .

Common Core Similarity Ratio Proportion

According to the Pythagorean theorem, "the square of the hypotenuse is equal to the sum of the squares of the other two sides," which can be expressed as $c^2 = a^2 + b^2$, where c is the hypotenuse (the longest side of the right triangle), and a and b are the other two (shorter) sides.

Sixth graders solve a variety of Common Core math problems using ratios. The words ratio and rate are both appropriate in sixth grade and can mostly be used interchangeably. A ratio is a comparison of two numbers of the same type (unit). Usually, ratio is used for part-part comparisons, but not always.

If two solids are similar, then their corresponding sides are all proportional. The ratio of their surface areas is the side ratio squared and note that the ratios of the areas does not give the actual surface areas. The volume ratio for the two solids is the side length ratio raised to the third power.
