This is a very powerful technique that can be used routinely with variable contrast (VC) papers, such as ILFORD MULTIGRADE. It makes use of the differing performance produced by combining low contrast and high contrast exposures in the same print.

## **Split grade printing - ILFORD PHOTO**

printing is a way to control contrast by making a very low contrast exposure, followed by a very high contrast exposure (or vice versa). The overall contrast of the print is controlled by varying the intensity of each of those exposures, and/or varying their

## **Printing with a Variable Contrast Light Source**

This is a very powerful technique that can be used routinely with variable contrast (VC) papers, such as Ilford Multigrade. It makes use of the differing performance produced by combining low contrast and high contrast exposures in the same print.

## **Split Grade Printing the Ilford Way | Darkroom Dave**

Contrast Control with Variable Contrast Paper I mentioned earlier than there are two main types of paper, and variable contrast is the second type. VC paper, as it's called, allows you to produce a variety of contrasts using the same paper. You do this by changing the color of the light you project onto the paper.

The column features a counter-balanced elevation control as well as an elevation scale for speedy printing size. Printmaker 35/67 Condenser, Printmaker Dichro 67 and 67 Variable Contrast Enlargers The Printmaker 35 is an excellent choice for those who are using the 35mm format while the 67 is equipped to handle from 35mm up to 6x7 cm formats.

## **Photography Enlarger | Beseler Photography Equipment | Beseler**

When printing with variable-contrast (VC) photo paper, there is a process called split filter printing that allows you to have more control of the highlights and shadows using a combination of filters for a single print. In essence, you use the extreme filters of #0 and #5 to isolate the lower and higher values of the paper.

## **Split Filter Printing - Guide to Film Photography**

Each variable in marginlist may be specified either with or without a contrast operator. For contrast-operated variables, the specified contrast comparisons are always performed. marginswithin specifies that contrasts and tests be performed within each combination of levels of the unoperated variables.
